MultiChain Explorer

View Everything Happening in Blockchain in Browser

As per its GitHUb Page here, this software reads the MultiChain block file, transforms and loads the data into a database, and presents a web interface similar to that popularized by Bitcoin block explorers like http://blockexplorer.com/.

MultiChain Explorer is a fork of the popular Abe project to add support for MultiChain blockchains with assets and permissions. MultiChain nodes must be online for all Explorer functions to work.
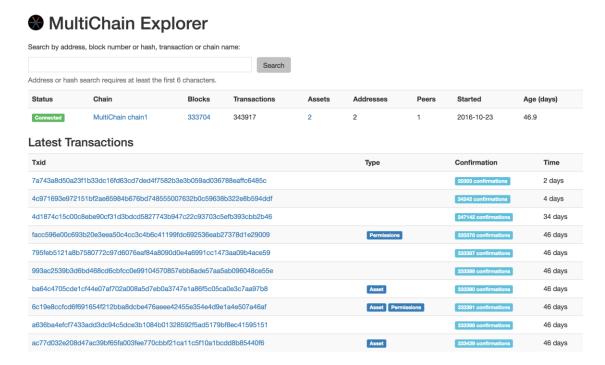

MultiChain Explorer is still under development, so things may break or change!

I would now refer to it's Github page & demonstrate how to install & configure the MultiChain Explorer.

This is how it will look like after the installation:

MultiChain Explorer

Search by address, block number or hash, transaction or chain name:

[   ] [Search]

Address or hash search requires at least the first 6 characters.

Status	Chain	Blocks	Transactions	Assets	Addresses	Peers	Started	Age (days)
Connected	MultiChain chain1	333704	343917	2	2	1	2016-10-23	46.9
