MultiChain
Private Blockchain Platform

Commands in Interactive Mode

Step 1: Lets jump to Interactive mode for chain1 on both nodes

multichain-cli chain1 (To switch to interactive mode for chain1)

```
[ubuntu@ip-172-31-50-255:~$ multichain-cli chain1

MultiChain Core RPC client build 1.0 alpha 26 protocol 10006

Interactive mode

chain1: █
```

Step 2: Execute commands

See a list of all available commands:

help

Show blockcount:

getblockcount

Show Blockchain tip:

getchaintips

Show all permissions currently assigned:

listpermissions

Create a new address in the wallet:

getnewaddress

List all addresses in the wallet:

getaddresses

Get the parameters of this blockchain (based on params.dat file):

getblockchainparams

For each node, get a list of connected peers:

getpeerinfo

 and many more. Please feel free to explore commands by your self.

That's it for this lecture.
